New Jersey Division of Revenue Awards Fairfax Imaging

Processing Platform Replacement Project Underway

Fairfax Imaging is pleased to announce that the State of New Jersey Division of Revenue chose Fairfax Imaging's Quick Modules solution to replace its current IBML and J&B Processing platform implemented by Grumman Data Systems. This state revenue/forms processing project is Fairfax Imaging's 18th such contract. Quick Modules will electronically process and deposit thousands of transactions per day, including Check 21 processing for incoming payments. New Jersey is also upgrading their current IMBL ImageTrac 2 scanners to ImageTrac 5 scanners.

Over 270,000 remittance forms and checks are processed each month by the system, including income tax returns, sales tax returns, tax extension forms, registrations for the Department of Motor Vehicles, and many types of invoices for the state. Full-page forms include property credit applications and multi-page corporate business tax forms. The Quick Modules system provides a complete solution which features a common workflow and scanning platform for both remittance and full-page forms processing.

When the system has been installed and thoroughly tested, Fairfax Imaging will provide training to over two dozen state employees who, in turn, will train hundreds of others on the system. System Administrators will receive separate, specialized training so that they may make adjustments as needed to the system using QMS (Quick Modules Studio), the centralized system building management module for New Jersey's project.

Fairfax Imaging is proud to partner with the State of New Jersey on this important undertaking. We appreciate their confidence in Quick Modules and look forward to the system's implementation!
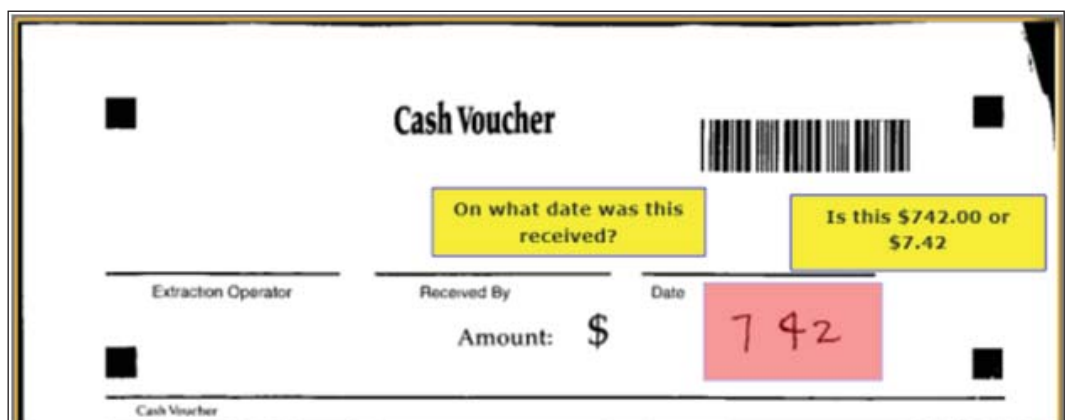

FAIRFAX IMAGING, INC.

5215 W. Laurel Street, Suite 110, Tampa, Florida 33607

QUICK MODULE HIGHLIGHT: Quick Key 3.5

Part of the power of the Quick Modules system is the ability to allow processing to continue while making necessary edits to document images that may need correction for one reason or another. Quick Key gives operators a flexible key editing and validation environment for correcting errors made during OCR/ICR processing.
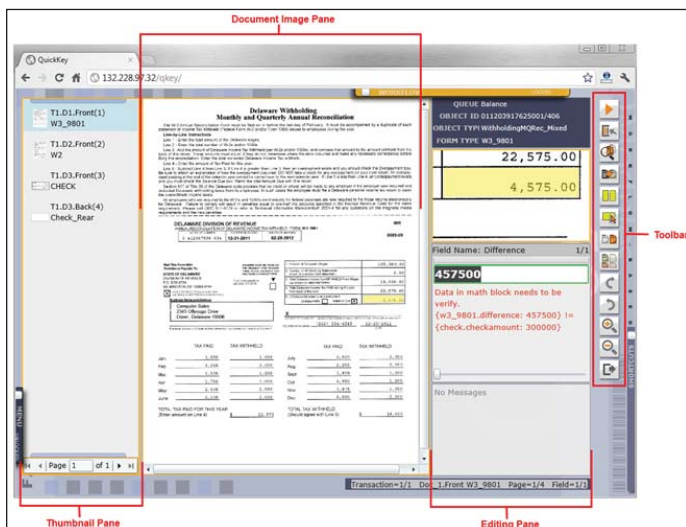

Quick Key displays individual images from transactions, highlighting specific fields on the image where OCR was unable to identify the captured data based on preset confidence thresholds or business rules that are unique to the form's required setup.

The Quick Key module also allows users to add notes to an image, which can be sent to another Quick Key user or manager for review. See the sample screen with notes below.

Editing capabilities include Character Repair, Field Repair, Key From Image, Key From Paper, Validation (Table Lookup, Interfield, Database, Double Key.) The balance function and key function co-exist in one module. You can make edits to a check, to a form, or to both at the same time in the same batch. The user interface is easy to use also.

Quick Key is thin-client module which means the program is not loaded onto the operator stations. Instead, it is on the network server. Therefore, it is easier to maintain the Quick Key program and it doesn't take up valuable space on the operator stations. It is .net based and is compatible with the previous 3.0 system.

This update of Quick Key is available to those Fairfax clients who are current in their maintenance for Quick Modules. There is an extra fee for professional services as some configuration and customization issues may occur during installation. If you are interested in learning more about Quick Key 3.5, please call Fairfax Imaging Sales at (877) 627-8325 and ask for Mike Minter, VP Sales and Marketing.

Fairfax Imaging Will Be At The FTA Technology Conference!

The FTA Technology Conference will be held in Indianapolis on August 12-15, 2012 and Fairfax Imaging will be exhibiting at this important annual event. We hope to see you there!
