

Quick Modules • The Choice For Tax & Revenue Departments

Fairfax Software • www.fairfaxsoftware.com

Nowhere are the benefits of image information processing more visible than in the tax and revenue industry. And now, more than 20 years since it was released, *Quick Modules* from Fairfax Software continues to lead as the system of choice for a number of state tax and revenue departments, the District of Columbia OTR, many city and local governments, and numerous Fortune 500 companies.

Quick Modules' comprehensive data capture and color imaging capabilities are the gold standard within the industry as is *Quick Modules'* exceptional ability to process both structured and unstructured forms.

The *Quick Modules* streamlined workflow automatically routes incoming transactions to operators for exception processing, balancing and key correction. Accurate character recognition combined with math blocks lead to most forms and payment items navigating the workflow with little to no operator interaction required.

Quick Modules eliminates pre-sorting and other manual interventions. The content of incoming mail (forms, correspondence, checks, etc.) is identified when received. Data is accurately classified and captured regardless of the order it entered the workflow. *Quick Modules* Check 21 capability reduces bank deposit time to minutes. Traditional two pass paper check processing is also available.

Quick Modules sophisticated reporting capability provides the ability to customize existing reports and to create ad hoc reports as required. The *Quick Modules* monitoring applications provide real time analysis of system health and performance.

As the name infers, *Quick Modules* is a modular system. What distinguishes it from other systems are the endless ways the modules can be hinged to create unique configurations to meet client needs.

Change is inevitable! Budget restraints, new business requirements, legal requirements and new product introductions are but some of the events that force change.

Fairfax Software *Quick* Modules For Tax & Revenue Departments

One Solution • One Workflow • One Provider

- ▶ Reduced time to deposit tax revenue.
- ▶ Automatic electronic bank deposit.
- ▶ Improved tax refund turnaround time.
- ▶ Reduced operational and maintenance costs.
- ▶ Superior viewing of tax forms, checks, coupons and correspondence.
- ▶ Ability to update tax form templates when tax forms change.
- ▶ Ability to handle structured and unstructured forms.
- ▶ Capability of remote deposit and capture.

Industry Awards

“Best Information Processing Solutions Provider”

CorpAmerica Software and Technology Awards, 2016

“Most Innovative Information Capture Product: Quick Modules 5.0”

CorpAmerica Software and Technology Awards, 2016

With *Quick* Modules, growing or changing is as simple as adding or reconfiguring resources because a *Quick* Modules configuration, while rock solid, is never rigid.

For years, clients have been seeking an economical yet effective way to convert from a legacy process to a more automated means using digital imaging. Hardware and software costs, along with the need for existing database interoperability, have proven to be major obstacles.

Quick Modules removes these obstacles because it accommodates virtually every modern scanner, transport, and database. From the smallest operation to the most massive demand, *Quick* Modules has stood the test of time and has been proven to eliminate the concern of conversion and the cap on capacity.

Quick Modules is comprehensive. Batches of mixed sized documents with a MICR, OCR/ICR, OMR, barcodes (1D/2D, postal), with, or without scan lines, are accepted. Checks are CAR/LAR compared to yield high capture rates. *Quick* Modules performs full color scan to properly handle dark color paper, safety paper and complex background paper. Two sided scanning with image quality detection is also accommodated.

Quick Modules makes short work of Tax Form processing, taking users directly to the field to be keyed.

Quick Modules is easy to integrate.

Integration with legacy systems through web services, database interaction, and table lookups are performed. Output can be appended and stored in ODBC databases or exported in XML files. Reports, both standard and customized, are easily facilitated within the system using a common report engine.

Competent and reliable maintenance processes are Fairfax Software hallmarks. The online Fairfax Account Support Tool – FAST – enables immediate notification and tracking of status for problem reports, change requests, and consumable purchases. There’s no voice mail uncertainty, or hold button frustration. It only takes a click of the mouse to get our attention.

We invite you to join the Fairfax Software *Quick* Modules user community.
